FITNESSBUDDY

Problem Statement No. 13 | Project Overview

Student: Mamathasri

Programme: B.Tech – Computer Science and Engineering, AI & ML Specialization

Institution: Vel Tech University, Chennai

1. The Challenge

In today's fast-paced world, many individuals struggle to maintain a healthy lifestyle due to a lack of personalized guidance, time constraints and inconsistent motivation. Traditional fitness solutions may require expensive subscriptions, in-person consultations or rigid schedules that do not adapt to personal preferences and daily routines.

There is a growing need for an accessible, friendly and intelligent virtual assistant that can provide on-demand fitness advice, healthy-lifestyle suggestions and basic nutrition guidance tailored to individual needs.

2. Proposed Solution

FitnessBuddy aims to solve this problem by offering a conversational, AI-powered health and fitness coach. Users can interact with the assistant and ask for practical guidance based on their preferences, available time, fitness level and daily routine.

3. Main Functions

• Recommend home workouts and routines based on user input.
• Provide motivational tips and daily fitness inspiration.
• Suggest simple, nutritious meal ideas.
• Encourage habit-building and consistency.

4. Objectives

• Make basic fitness guidance easier to access.
• Offer friendly, conversational support on demand.
• Help users find realistic home-workout ideas.
• Encourage healthy food choices and positive daily habits.
• Support consistency through motivation and simple guidance.

5. Technology Requirement

Mandatory: Use IBM Cloud Lite services and/or IBM Granite. This implementation connects the Python application to IBM watsonx.ai and an IBM Granite language model.

6. Technology Stack and Workflow

Technologies: Python, Gradio, IBM watsonx.ai, IBM Granite, Git and GitHub.
Workflow: User asks a question → Gradio receives the message → Python prepares the prompt → IBM watsonx.ai sends it to Granite → Granite generates a response → FitnessBuddy displays the guidance.

7. Expected Outcome

A working conversational prototype that can respond to user requests with home-workout recommendations, motivational messages, nutritious meal ideas and habit-building suggestions.

8. Scope and Safety

FitnessBuddy is an educational prototype and does not replace a doctor, registered dietitian or qualified fitness professional. It cannot diagnose or treat medical conditions or guarantee results. Users with pain, injury, pregnancy, chronic conditions or other health concerns should seek professional advice before changing their exercise or diet routine.
